

## Motor City Dolly DIY Bone Coffee Table Kit Instructions

Thanks so much for purchasing this DIY kit to make your own 1/6 scale skelly coffee table. This table is a unique design by Pete Coe.

To complete your table, you will also need:

Wood Glue

Fine Sand Paper

Paint or other choice of finish

Rubber Bands

A Dremel can be helpful but not required

All of the pieces in your kit come with protective masking on both sides. Step one is to remove the masking on each piece, then give them a light sanding with fine grit sandpaper to remove any glue residue.

Your kit has four side pieces---the outer pieces do not have any notches, while the two identical inner pieces have slots for the other pieces to fit into. Glue an inner piece to each outer piece.

Once the sides have dried, glue the long front and back pieces into the slots of the side pieces, and use rubber bands to hold together while they dry.

Finally, insert the top of the coffee table into the top side slots, and glue into place.

Once the glue has dried, I like to use my Dremel and sand paper to round the edges and make the piece look more realistic. Finally, prime and paint to your preference, then set the clear acrylic top in place. I would love to see your finished piece---please tag me if you share it on IG @Coependent. <3
