

## **Motor City Dolly** DIY Oval Coffee Table Kit Instructions

Thanks so much for purchasing this DIY kit to make your own 1/6 scale oval coffee table. This table was designed by Maryna Korobkina and produced as a kit with permission.

To complete your table, you will also need:

Wood Glue

Fine Sand Paper

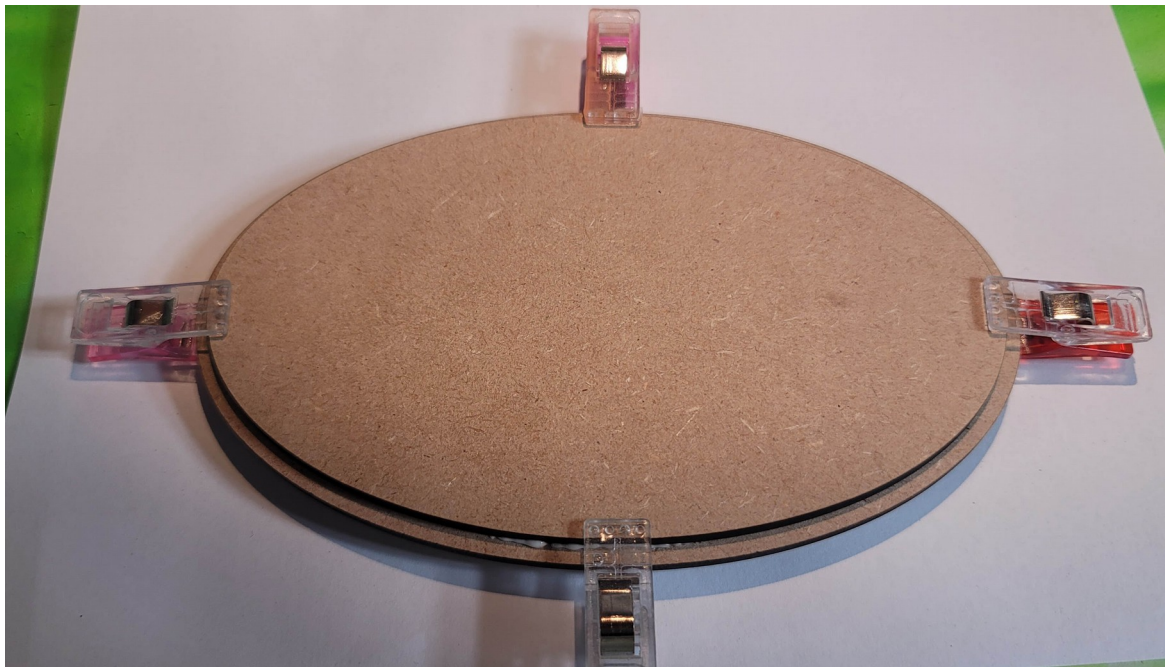

Paint or other choice of finish

Small clamps or craft clips

A Dremel can be helpful but not required

All of the pieces in your kit come with protective masking on both sides. Step one is to remove the masking on each piece, then give them a light sanding with fine grit sandpaper to remove any glue residue.

Your kit contains two flat oval pieces. Glue the smaller oval to the larger oval, centered, and clamp while it dries.

Next, turn the oval so that the larger piece is facing up, and glue the notched ring piece to it, centered, with the notches in the ring matching the notches in the oval.

Now glue a leg in each notch, with the curves facing out.

Once the glue has dried, I like to use my Dremel and sand paper to round the edges and make the piece look more realistic.

Finally, prime and paint to your preference. I would love to see your finished piece---please tag me if you share it on IG @Coependent. <3
